

Concrete Barriers

Rapid, effective and versatile security and protection

Product overview

Highly effective and incredibly versatile, concrete barriers are a cost effective security solution that can be used in a wide variety of situations.

Applications may include a perimeter for a vacant property, controlling vehicle movement at an event, preventing access to a car park or construction site, or separating workers from fast-moving traffic on a roadway. We supply and install a wide range of concrete barriers and blocks. Quick and easy to install, they can be relocated at short notice if required, with minimal disruption to your operation.

Why Clearway Concrete Barriers?

- ✓ Effective, robust perimeter security
- ✓ Rapid installation for instant protection
- ✓ Cost effective, immovable physical barrier
- ✓ Control vehicle movement, prevent ram-raiding
- ✓ Versatile: can be used in a wide variety of applications
- ✓ Ideal for protecting road and construction workers and pedestrians

Applications

- Perimeter security for vacant properties, high-value and vulnerable locations.
- Construction site security, including preventing unauthorised vehicle access.
- Car parking barriers and temporary parking facility construction.
- Traffic management for events.
- Protection of public spaces from terrorist attacks and illegal entry.
- Highways protection for workers and vehicles.
- Flood defence.
- Earth retaining walls.

Temporary Vertical Concrete Barriers (TVCB)

Temporary Vertical Concrete Barriers (TVCBs) are used to provide demarcation and a physical barrier to unauthorised entry.

Where an immovable physical barrier is required, our 2,500kg concrete barrier blocks, also referred to as V28 barriers, built to BS EN 1317 standard, provide the perfect temporary or permanent solution.

Purpose-built to be effective and robust, our TVCBs are manufactured from high-quality concrete and crash tested to withstand high vehicle impact, ideal for protecting both road and construction workers and pedestrians.

Jersey Barriers

Jersey Barriers are concrete barriers designed to protect against high impact.

Ideal for traffic management, specifically separating lanes of traffic, or to protect construction workers and pedestrians in the event of vehicle collisions or a crash into a barrier. Jersey Barriers use an interlocking system so that you can fully secure a continuous perimeter of any length.

When Jersey Barriers are utilised as edge-protection around perimeters they offer extremely effective protection against attempted intrusion with vehicles. If traffic rerouting and general traffic management are required during road works or other construction works, Jersey Barriers help to provide a safe environment for workers and pedestrians.

Our crash tested TVCB barriers weigh an impressive 2,500kg and are built to BS EN 1317 standard.

Interlocking Concrete Blocks

Interlocking concrete blocks are specially designed to stack both vertically and horizontally, creating a retaining wall of any size.

Despite their immense weight, they are quick to assemble and easy to install. With excellent fire and water-resistant qualities, interlocking blocks are a robust solution for protecting vacant properties, managing vehicle and pedestrian access or building custom storage bays and partition walls.

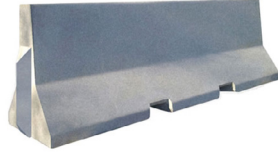

These blocks are referred to as retaining wall blocks because of the way they allow for secure stacking in any direction to provide solid, highly-effective wall structures or barriers that may be required for a wide range of projects.

Available in a variety of sizes and weights, our interlocking concrete blocks can have 2, 4, 6, 8 or 10 nodes. These allow for an unlimited range of height, shape and length combinations for anything from storage systems, retaining walls, flood defence or erecting temporary structures. The reusable nature of interlocking concrete barriers makes them incredibly diverse. This type of block can be swiftly assembled and taken down for assembly at a new site.

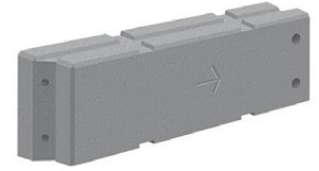

Technical information

Jersey Barrier	
Size	Length: 2.5m Height: 810mm Width: 610mm
Weight	1450kg

Temporary Vertical Concrete Barriers (TVCB)	
Size	Length: 3m Height: 800mm Width: 450mm
Weight	2500kg

Interlocking Blocks	
Size	Length: 1.2m or 1.6m Height: 800mm Width: 800mm
Weight	Weight: 1200kg, 1800kg or 2400kg

Barriers with Gates	
Size	Length: 3m to 4m Height: 825mm

Looking for extra security?

Clearway also provides a wide range of vacant property security solutions including: Temporary CCTV, Alarm Systems and Steel Screens & Doors

RAPID RESPONSE

The Clearway team can provide Concrete Barriers quickly in urgent situations. Whether short-term interim measures to defend premises or assets following a break-in, or a permanent installation to mitigate an ongoing safety threat.
