

Construction Site Security

Protect your valuable plant and equipment from theft and vandalism

Securing your construction site is vitally important to prevent the loss of and damage to, machinery and materials, resulting in downtime and costly insurance claims. It is also critical for keeping on site staff and the general public safe.

At Clearway we understand that securing your construction site and properties under refurbishment is imperative. We have a wealth of experience in delivering professional construction site preventative measures – ranging from temporary mobile CCTV towers with remote monitoring to site access control, manned guarding and everything in between.

Our security solutions are designed to deter criminal activity and ensure your site and its valuable assets remain protected, as the consequential costs can be considerable, both in terms of delays to your project and financial loss to the scheme promoter/contractor.

Why choose Clearway?

- ✓ **One-stop solution**
- ✓ **Cost-effective** and market-leading security solutions
- ✓ **Insurance compliance** awareness
- ✓ Nationwide **rapid response**
- ✓ **Same-day service** available
- ✓ **24/7/365** call centre

At Clearway we utilise industry knowledge, vast experience and an extensive 'toolkit' to provide a rapid and effective response to your requirements – ensuring you can protect your critical assets with minimal hassle.

Alarm monitoring
& handling

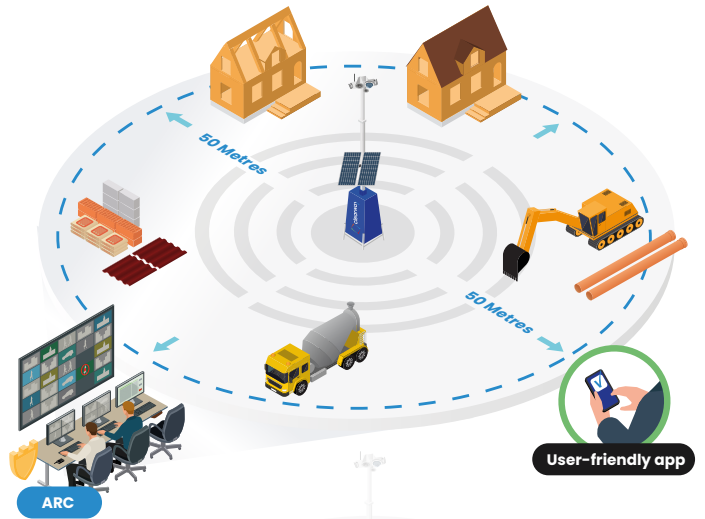

Temporary CCTV and Remote Monitoring

Comprehensive CCTV installation and monitoring not only provides a clear visual deterrent to any would-be trespassers, but is a proven method of detecting criminal activity - monitored 24/7 by trained professionals assessing security alerts for false alarms and ready to notify police or dispatch security personnel at a moment's notice.

An initial audit is used to determine key areas that need to be monitored at your site, along with any potential weak points that should be monitored and secured in combination with other security measures we recommend.

All CCTV can be monitored in real-time by security personnel at our dedicated Alarm Receiving Centre (ARC), which has been accredited to Gold Standard by the UK's National Security Inspectorate.

Construction sites benefit enormously from our temporary CCTV systems as these can be quickly set up on-site. Our rapid deployment, solar-powered inView CCTV Towers are perfect for sites with limited or no access to power/internet access. These systems require little maintenance and can be taken down at a moment's notice. They provide 360-degree coverage of even the largest areas and footage is viewable and controllable remotely to make your construction site secure from every angle.

Multiple inView CCTV towers can be added to extend site coverage

inView Detect

inView Detect is an autonomous intrusion detection system utilising battery and solar power that facilitates rapid deployment, combined with simplistic set up, to a wide variety of applications such as construction sites, vacant properties, land, plant and machinery, and areas requiring immediate security cover.

Designed specifically with ease of deployment in mind, this portable security solution offers full 360° coverage and can be armed and disarmed remotely via a user-friendly app or scheduling tool, or locally with optional fob or keypad. If activations occur, then all alerts are verified through the integral AI system and our NSI GOLD CAT II Alarm Receiving Centre (ARC) to ensure that any alarm activation protocols are instantly followed, whilst also providing all site specific information.

Clearway's innovative wearable technology is designed to help protect those working in high risk / volatile / public facing environments.

Current 'bodycam' solutions mean you need different devices for various activities. Clearway has amalgamated these into one piece of equipment for the operative/lone worker in either the form of a bodycam or for some use cases the device simply attaches to a workers hard hat - 'helmet cam'.

With the function to live stream, this also means less return visits to site, you can easily have your co-workers login live to what you are looking at and solve issues in real-time on site, giving the view from the workers eye level perspective. This also reduces the need for people to attend site for inspections and helps designers with technical queries.

**Steel Security Doors
and Screens**

Steel security doors and screens provide an invaluable layer of protection against forced entry. Whether required for several weeks or long-term, professionally fitted steel security doors and screens create a shield against intruders, providing a secure safety barrier to deter criminal behaviour.

Clearway's industry accredited keyless steel security door provides a durable and reliable solution for securing your building site, keeping your site free from vandalism, squatters or any unwanted intruders, and is the only security door in its class to be both police and insurance approved. Our security doors can replace existing doors and are designed to give authorised personnel easy access to the property or site.

✓ **CAPTURE** ✓ **RECORD** ✓ **DETER**

Remote download of footage – saves time & cost

Works as a 2-way radio – no need for multiple devices

Live SOS alerting back to our NSI Gold Cat II Alarm Receiving Centre (ARC)

12-hour lithium battery life – quick charging to protect every worker across every shift

HELMET CAM

BODYCAM

LONE WORKER

Access Control

Controlling access to any perimeter is essential for the security of the site, the equipment and the personnel working within. By implementing effective access control you can keep your staff and the public safe, your site secure and avoid the unwanted costs of theft and vandalism.

For construction sites, we recommend installing a turnstile cabin with a manned security office. This can also be combined with biometric and keycard reader access controls to ensure only approved personnel are able to gain access. Our building site access control system takes the burden of signing in and out away from staff and is fully insurance approved for your business' peace of mind.

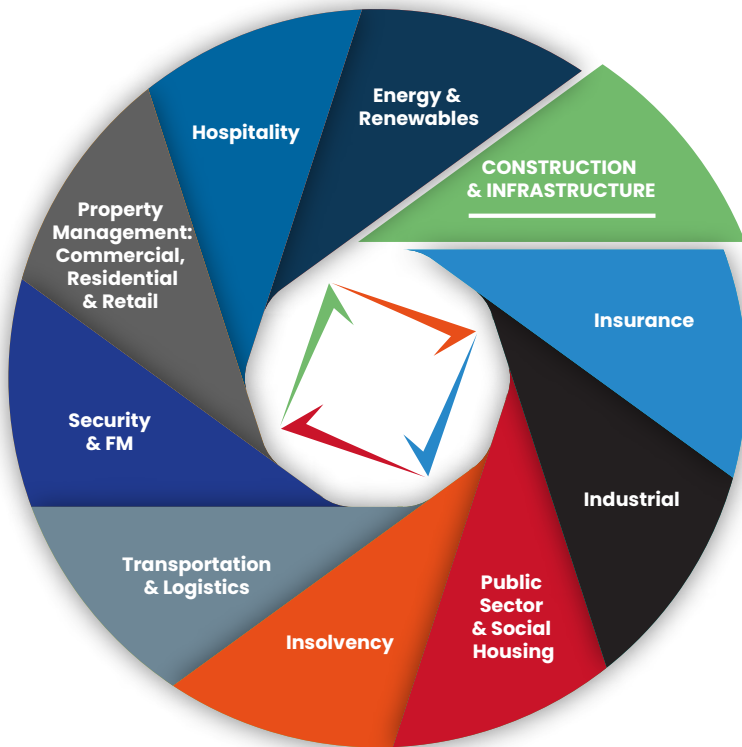

Additional security solutions

Security Solution	Description
 Concrete barriers	<p>To bolster perimeter security, concrete barrier blocks are an ideal and flexible solution, enabling large perimeters to be fully protected with a continuous, physical barrier, or to protect a small access point. They can be used to restrict vehicular access, which helps to prevent thieves using vehicles to transport stolen goods, and to prevent fly-tipping which is a major issue on open or unoccupied land.</p>
 inView Video Verified Alarm	<p>Once our video verified alarm system is triggered, a 100dB ringer will sound and its built-in camera will capture a series of 10 consecutive still images, collate them into a ten second clip and send it via the mobile network directly to the end-user and/or Alarm Receiving Centre (ARC). The appropriate action will be taken depending on the perceived level of threat. This battery-powered, wire-free alarm is an efficient way of monitoring construction sites for both false and genuine alarm activations, especially for vacant construction sites or areas with low movement expected.</p>
 Site inspections	<p>Regular site inspections are essential as they can quickly identify any potential risks likely to arise on a construction site. Inspections include comprehensive checks and photographic evidence that can raise awareness of a situation that requires immediate action. Regular inspection records provide a well maintained, permanent log of every visit to your site.</p>
 Dog Units/ Patrols	<p>Security dogs complement the skills of security officers, offering higher levels of threat detection and a faster response. Having a highly trained security dog is an efficient, cost-effective way of providing enhanced security for a range of different scenarios. The cost of a single security guard with a dog is lower than the cost of two security guards, as well as being a more effective deterrent. A security guard with a supporting guard dog is also seen as a more intimidating prospect to potential intruders.</p>
 Manned Guarding & Mobile patrols	<p>Clearway security teams provide national response security 24/7/365, on short/long-term basis. They're SIA Accredited to deliver a full range of guarding roles. The option of mobile patrols is a proven and cost-effective solution; delivering a professional site security presence with patrols at irregular intervals to avoid establishing any set pattern and strengthening your security. Mobile security patrol teams maintain detailed records and reports of any perceived threats such as suspicious vehicles or individuals, giving you peace of mind that threat is anticipated, and provide a highly visible and proactive security solution.</p>
 Open and Lock Up Service	<p>Open and lock up services are invaluable when a construction site needs to remain secure at specified times. We can guarantee your site is secured when you need it and opened and closed at the required times to keep staff/equipment safe. Following the closure of your building site, a Clearway staff member will ensure all staff have left and the site is secured prior to setting the alarm systems. Our staff will also be there to open the site when needed, allowing workers to safely access the site, keeping the area secure.</p>
 PPE Monitoring and Compliance	<p>Protect your teams and reduce your liability with an automated AI-powered edge and cloud-based solution that enables PPE monitoring and compliance. Deployed with our range of CCTV Towers or via clients' existing IP CCTV systems, it detects breaches and risks in real-time, notifying our analytics platform. Statistics, automated email notifications and near miss reporting accompanied by snapshots of the non-compliant wearing of PPE can be provided. The system can also be tailored to monitor the minimum PPE requirements of a specific site and detection zones can be implemented to mitigate false positive alerts for areas where PPE is not required.</p>

Experienced and trusted

Over the last 30 years, Clearway has developed an unparalleled range of security, safety risk mitigation and intelligent monitoring solutions - protecting your people, property and assets. Working across a wide range of industry sectors, our proven best practice approach is delivered with certainty, consistency and sustainability, giving you complete peace of mind.
