

Complete visibility

with a 24/7 standalone access control system

Background

The financial services firm, KPMG, reduced team numbers at their office in Crawley, Surrey and downsized from all three floors of the building to only one. This meant that the overall management of the building security, provided by their own 24 hour security team up until that point, returned to the managing agent, Workman LLP.

As the KPMG team now numbered approximately 80, with more than 200 people going in and out of the building when fully occupied, it became clear that a new entry security system was required. A system that would enable staff from up to three different tenants to access the building, but one which was simple to use and extremely secure.

Solution

Clearway recommended and installed a robust solution; a PAXTON standalone access control system to the front entry doors, which allowed easy multi-user access with the tap of a key fob. It's the perfect solution for a building of this size with this number of occupants.

In addition, we installed a GSM intercom system. Out of hours deliveries or visitors simply pressed a button which goes through to a response centre managed by a Clearway partner who can clearly see the visitor or delivery driver via CCTV and grant or deny them entry to the building.

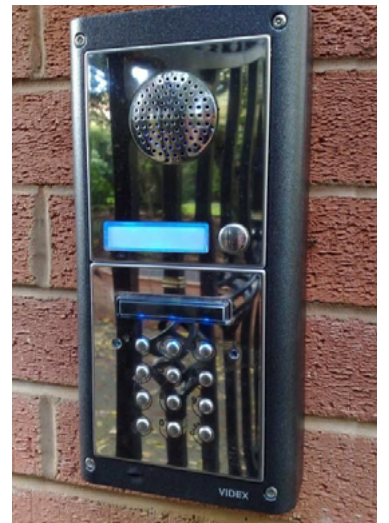

Key Services

-  Access control
-  GSM intercom system

Outcome

By having this service off-site, there was a significant cost saving compared to having a member of staff on-site 24/7. This system means the doors remain locked out of hours but, as the staff occasionally require 24/7 access, they can simply enter the secured building using an out of hours fob.

The client also benefits from full visibility of who has accessed the building and at what times due to our regular reports.
